CRUD System Documentaion

HTML,Bootstrap V5.2

- Boostrap V5.2 to make a form ,buttons,and ofcourse table with the HTML Tags

CSS

- To make the text area don't change it's size

- To make the search highlight on the character that appears in search

JS

- First I took the input from the 4 input and stored them in 4 varibles

- second I see if the input is already in local storage or not and if not it has to add it to the array

- finally I Declard the functions as follow━

1.Takeinput()⇒ To take input from user in object

2.display()⇒ To display all the data in the table in HTML

3.Clear()⇒ To clear the form after every addfor products

4.deleteitem(index)⇒to delete the element you select

5.searchitem()⇒to search over value and I link it using onkeyup to do areal-time search

6.Updateelement()⇒To update the data in a particular index or place

The website

Number	Product Name	Product Price	Product Model	Product Description	Delete	Update
